HOW THE DATA IS COLLECTED, AND WHAT IS NORMAL

Most signals come off one garment, the Bio-Monitor shirt flown on the ISS since 2019; the rest takes two minutes each morning. "Your baseline" is the median of your 14 pre-flight days.

SIGNAL	DEVICE	HOW	HOW OFTEN	NORMAL
Heart rate, HRV	Bio-Monitor shirt	3-lead ECG woven into the fabric	Continuous	60–100 bpm (AHA); HRV against your baseline
Breathing rate	Bio-Monitor shirt	Stretch bands on chest and abdomen	Continuous	12–20 per minute
Blood oxygen	Bio-Monitor headband	Pulse oximeter (red and infrared light)	Continuous	95–100%; below 90% is low
Skin temp, activity, sleep	Bio-Monitor shirt	Thermistor and accelerometer	Continuous	Fever 38.0 °C+; sleep 7 h+ (8.5 h scheduled)
Blood pressure	Arm cuff	Seated, 5 min rest, two readings	Every morning	<120/80; 130/80 stage 1; 140/90 stage 2
Blood glucose	Finger-stick meter	Fasting, before breakfast	Every morning	70–99 mg/dL fasting
Body mass	SLAMMD mass device	Spring oscillation (nothing weighs in orbit)	Weekly	Within 5% of your baseline
Radiation dose	Personal dosimeter	Worn on the body, read into the tablet	Daily reading	~1.8 mSv/day transit, 0.6 Mars; 600 mSv career
Reaction time, lapses	Tablet	60 s reaction test on the screen	After waking	Your baseline; a lapse is 355 ms or slower
Mood, stress, symptoms	Tablet	Check-in: 1–5 scales and a symptom list	Every morning	Your baseline; red-flag symptoms urgent

THE RESULT: ONE SCREEN PER ASTRONAUT

WHO

Portrait, name, role, agency and days in space, top left.

HOW AM I TODAY

One ring, green, amber or red, with a plain-language summary.

EVERY SIGNAL

Sixteen tiles in four groups, each with a two-week sparkline over the baseline band.

WHAT TO DO

Alerts explain the rule, cite the source, give a checklist, and draft the surgeon message.
